## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 10\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : COD

##### 1. Problem Statement

A city traffic management system needs to track vehicles entering a toll booth. Each vehicle is uniquely identified by its registration number. The system should allow adding vehicles to a record, ensuring that no duplicate registration numbers exist. The vehicles should be stored in a HashSet, which does not guarantee any specific order.

Your task is to implement a program using a HashSet that allows adding vehicle details and displaying the records.

##### ***Input Format***

The first line of input contains an integer N - the number of vehicles.

The next N lines contain details of each vehicle in the format: "RegNumber

OwnerName VehicleType"

1. RegNumber (String) - A unique registration number (Alphanumeric).
2. OwnerName (String) - The name of the vehicle owner.
3. VehicleType (String, Car, Bike, or Truck) - The type of vehicle.

If a vehicle with the same registration number is already present, ignore the duplicate entry.

### ***Output Format***

The output prints the unique vehicle records in any order (since HashSet does not maintain order).

Output format: "RegNumber OwnerName VehicleType"

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 5

KA01AB1234 John Car  
MH02CD5678 Alice Bike  
DL03EF9012 Bob Truck  
TN04GH3456 Mike Car  
KA01AB1234 John Car

Output: TN04GH3456 Mike Car  
KA01AB1234 John Car  
MH02CD5678 Alice Bike  
DL03EF9012 Bob Truck

### ***Answer***

```
// You are using Java
import java.util.*;
```

```
class Vehicle {
    private String regNumber;
    private String ownerName;
    private String vehicleType;

    public Vehicle(String regNumber, String ownerName, String vehicleType) {
```

```

        this.regNumber = regNumber;
        this.ownerName = ownerName;
        this.vehicleType = vehicleType;
    }

    public String getRegNumber() { return regNumber; }
    public String getOwnerName() { return ownerName; }
    public String getVehicleType() { return vehicleType; }

    @Override
    public boolean equals(Object o) {
        if (this == o) return true;
        if (o == null || getClass() != o.getClass()) return false;
        Vehicle vehicle = (Vehicle) o;
        return regNumber.equals(vehicle.regNumber);
    }

    @Override
    public int hashCode() {
        return Objects.hash(regNumber);
    }
}

class TrafficSystem {
    private Set<Vehicle> vehicles = new HashSet<>();

    public void addVehicle(String regNumber, String ownerName, String
vehicleType) {
        vehicles.add(new Vehicle(regNumber, ownerName, vehicleType));
    }

    public void displayVehicles() {
        for (Vehicle v : vehicles) {
            System.out.println(v.getRegNumber() + " " + v.getOwnerName() + " " +
v.getVehicleType());
        }
    }
}

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
    }
}

```

```
TrafficSystem system = new TrafficSystem();

int n = sc.nextInt();
for (int i = 0; i < n; i++) {
    String regNumber = sc.next();
    String ownerName = sc.next();
    String vehicleType = sc.next();
    system.addVehicle(regNumber, ownerName, vehicleType);
}

system.displayVehicles();
sc.close();
}
```

**Status :** Correct

**Marks :** 10/10
